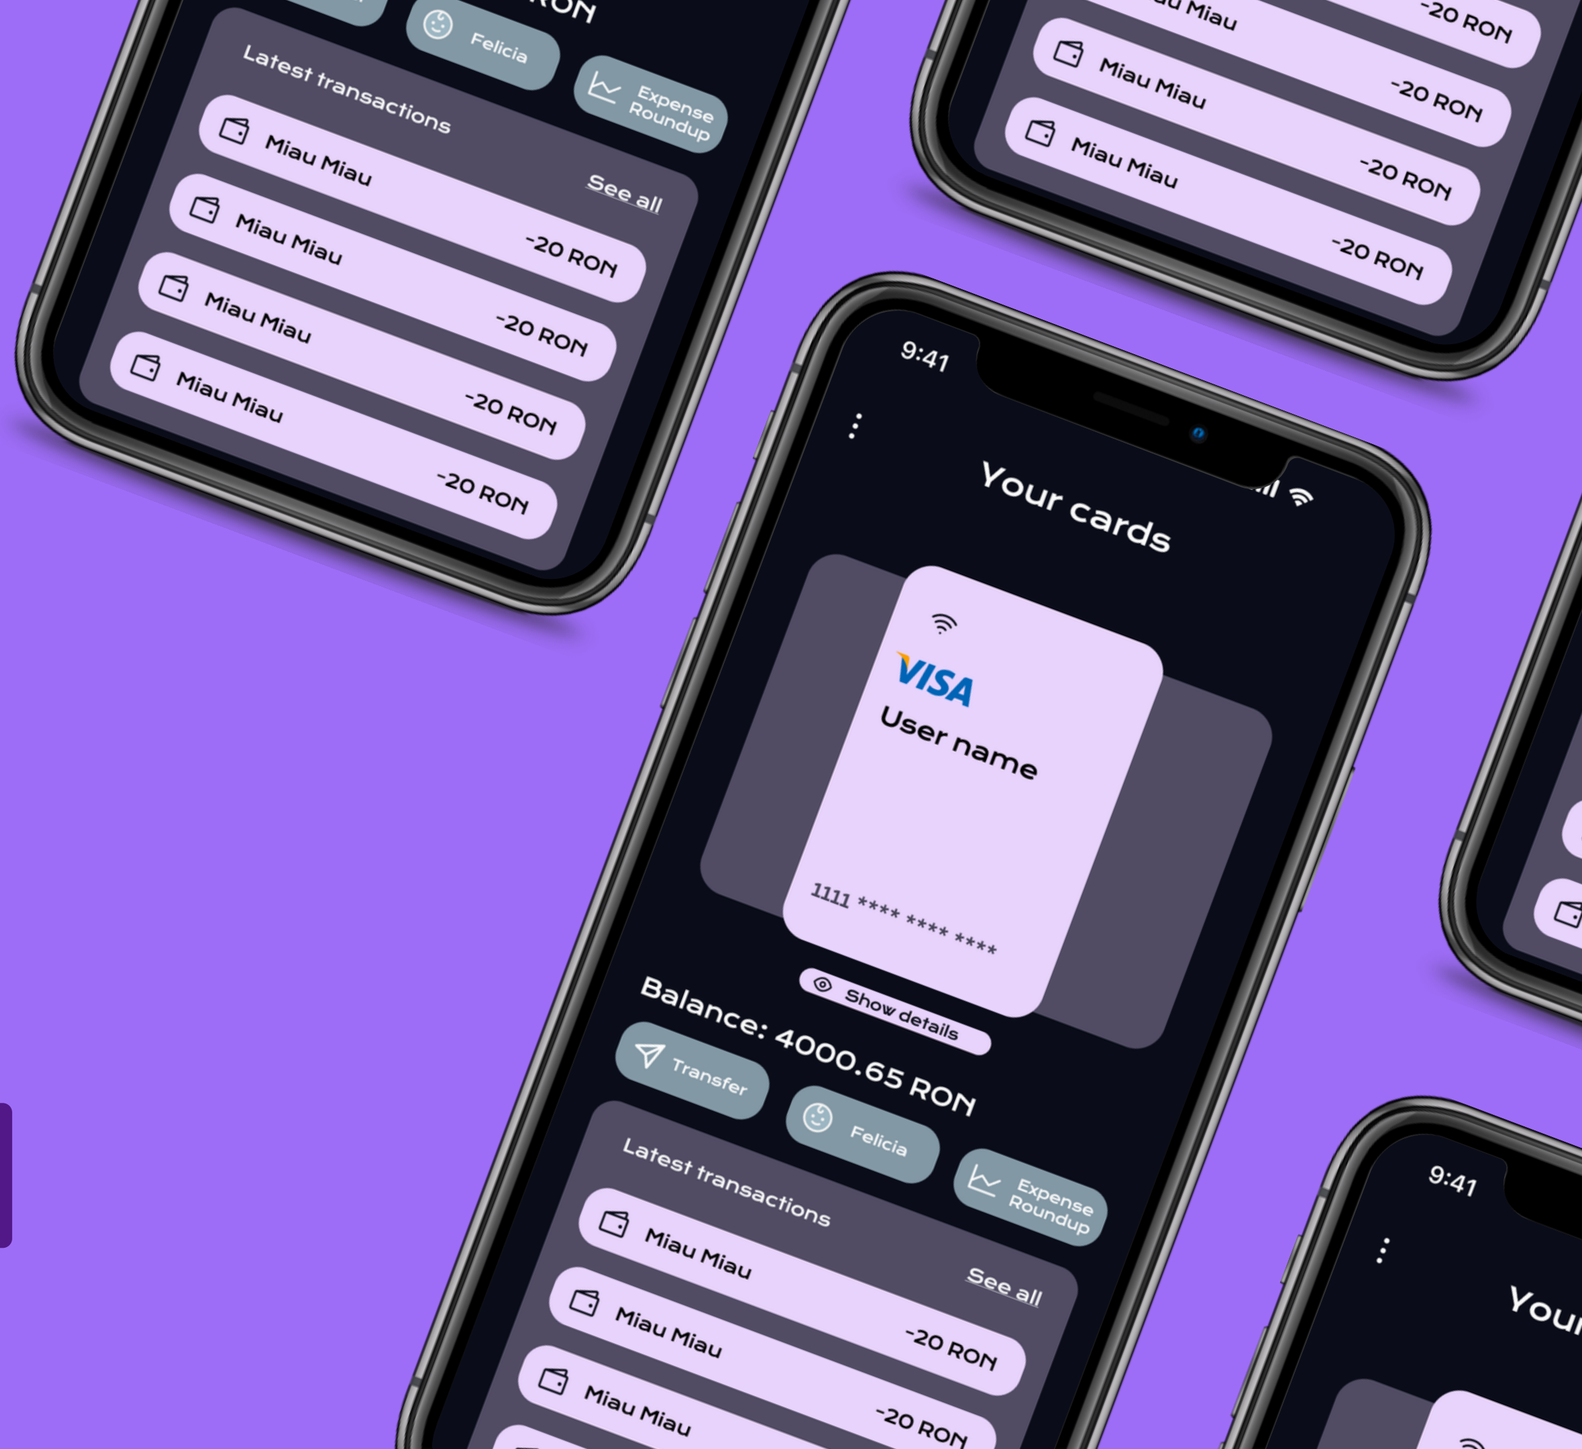
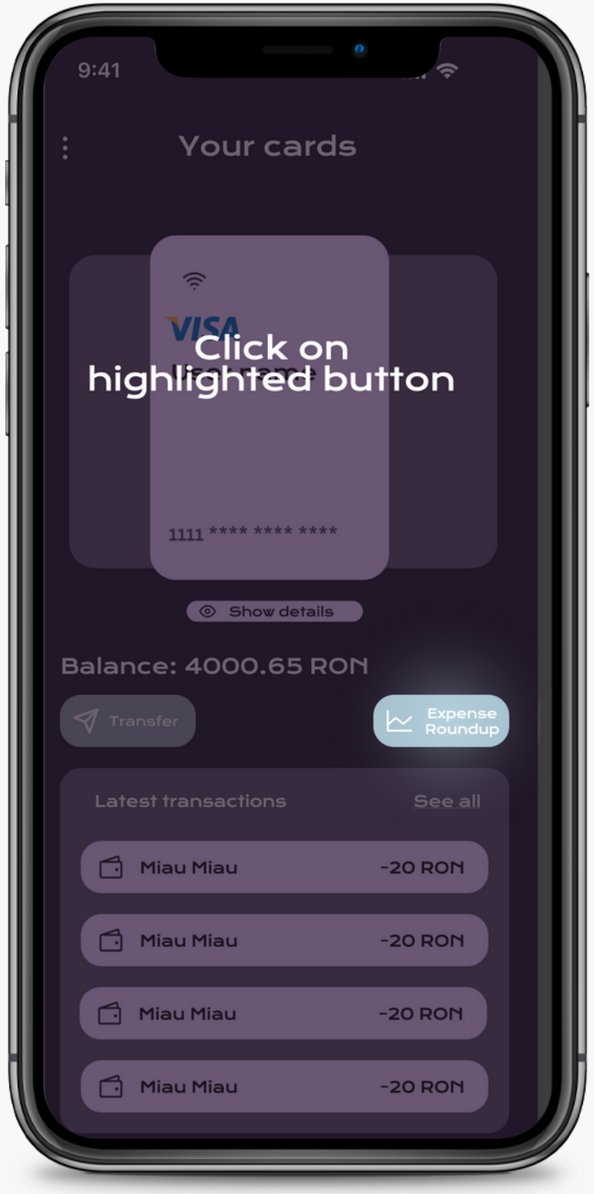
Felicia

powered by **Gucci**





Our ~~initial~~ idea

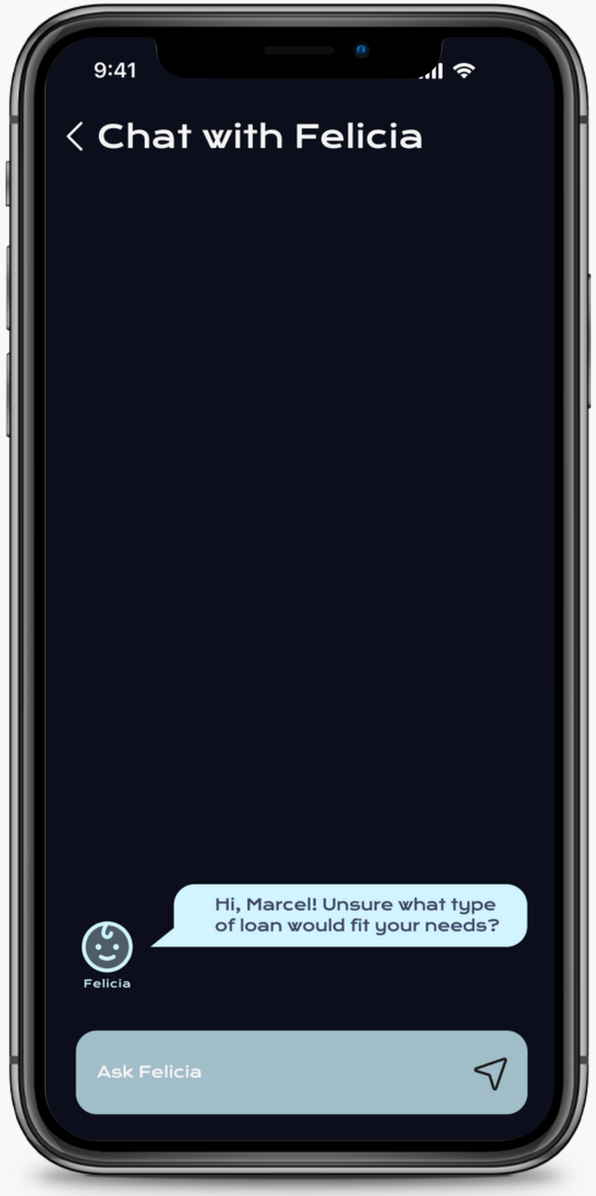
Initially, we wanted to train a neural network on user taps and use it to create a secure banking app. The app would flag suspicious user taps and send a security notification.

THE SITUATION, APPROXIMATELY 23 HOURS AGO

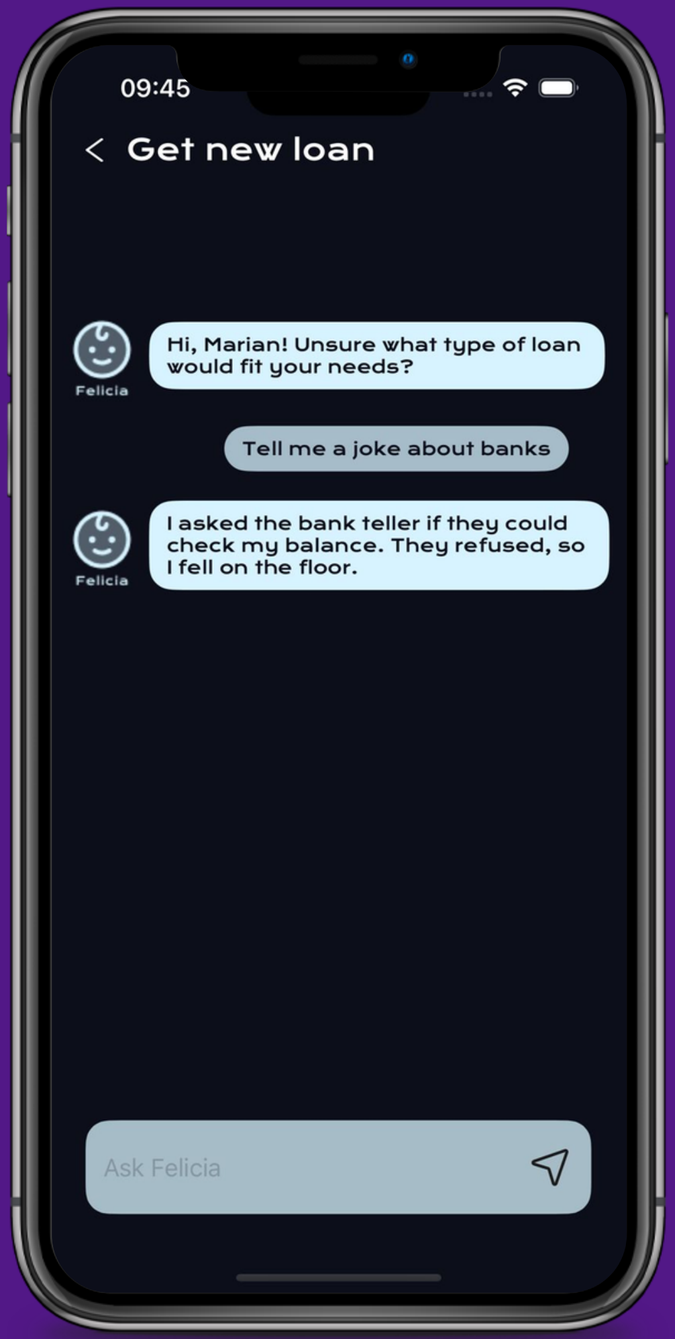
So we went along with it

INTRODUCING FELICIA

Based on Cohere LLM and our custom RAG, Felicia accepts simple prompts from users, enhances them and gives a prompt answer. Felicia’s specialty is, as expected, Banking :)



SHE ALSO HAS GOOD HUMOR



Cohere LLM

Cohere's LLMs are designed to power various applications, including conversational agents, summarization, and copywriting, through models like Command, Rerank, and Embed. These models are accessible via the Cohere API, cloud AI platforms, and private cloud deployments, offering flexibility and security for developers and enterprises.
Felicia uses Command model

RAT

It’s better if we hear it directly from Bogdan
